

Influenza A virus Nucleoprotein Antibody

Catalogue No.: abx016030

Western blot analysis using Influenza A virus Nucleoprotein antibody against full-length recombinant Influenza A virus Nucleoprotein.

Influenza A and B are the two types of influenza viruses that cause epidemic human disease. Influenza type C infections cause a mild respiratory illness and are not thought to cause epidemics. Influenza A viruses are further categorized into subtypes on the basis of two surface antigens: hemagglutinin (H) and neuraminidase (N). Strains are also described by geographic origin, strain number and year of isolation. A/Korea/426/68 (H2N2).

Target: Influenza A virus Nucleoprotein

Clonality: Monoclonal

Reactivity: Virus

Tested Applications: ELISA

Host: Mouse

Recommended dilutions: ELISA: 1/10000. Optimal dilutions/concentrations should be determined by the end user.

Conjugation: Unconjugated

Immunogen: Purified recombinant fragment of Influenza A virus nucleoprotein expressed in E. coli strain BL21 (DE3).

Isotype: IgG₁ Kappa

Form: Liquid

Purification: Unpurified ascites.

Storage: Aliquot and store at -20°C. Avoid repeated freeze/thaw cycles.

Buffer: Ascitic fluid containing 0.03% sodium azide.

Concentration: Not determined.

Datasheet

Version: 3.0.0

Revision date: 29 Sep 2025
