Catalogue No.: abx147112

WB analysis of Jurkat cells, using MYD88 antibody (1/1000 dilution).

Myeloid Differentiation Primary Response Protein MyD88 (MYD88) Antibody is a Rabbit Polyclonal antibody for the detection of MYD88.

This gene encodes a cytosolic adapter protein that plays a central role in the innate and adaptive immune response. This protein functions as an essential signal transducer in the interleukin-1 and Toll-like receptor signaling pathways. These pathways regulate that activation of numerous proinflammatory genes. The encoded protein consists of an N-terminal death domain and a C-terminal Toll-interleukin1 receptor domain. Patients with defects in this gene have an increased susceptibility to pyogenic bacterial infections. Alternate splicing results in multiple transcript variants.
