

## Protocadherin Alpha-10 (PCDHA10) Antibody

Catalogue No.:abx029557

This gene is a member of the protocadherin alpha gene cluster, one of three related gene clusters tandemly linked on chromosome five that demonstrate an unusual genomic organization similar to that of B-cell and T-cell receptor gene clusters. The alpha gene cluster is composed of 15 cadherin superfamily genes related to the mouse CNR genes and consists of 13 highly similar and 2 more distantly related coding sequences. The tandem array of 15 N-terminal exons, or variable exons, are followed by downstream C-terminal exons, or constant exons, which are shared by all genes in the cluster. The large, uninterrupted N-terminal exons each encode six cadherin ectodomains while the C-terminal exons encode the cytoplasmic domain. These neural cadherin-like cell adhesion proteins are integral plasma membrane proteins that most likely play a critical role in the establishment and function of specific cell-cell connections in the brain. Alternative splicing has been observed and additional variants have been suggested but their full-length nature has yet to be determined.

| Target:               | Protocadherin Alpha-10 (PCDHA10)   |
|-----------------------|--|
| Clonality:            | Polyclonal   |
| Reactivity:           | Human  |
| Tested Applications:  | ELISA, WB  |
| Host:                 | Rabbit   |
| Recommended dilutions | : WB: 1/1000. Optimal dilutions/concentrations should be determined by the end user.   |
| Conjugation:          | Unconjugated   |
| Immunogen:            | KLH-conjugated synthetic peptide between 771-798 amino acids from the C-terminal region of human PCDHA10.  |
| lsotype:              | IgG  |
| Form:                 | Liquid   |
| Purification:         | Purified through a protein A column, followed by peptide affinity purification.  |
| Storage:              | Aliquot and store at -20°C. Avoid repeated freeze/thaw cycles.   |
