

Nuclear Receptor Coactivator 5 (NCOA5) Antibody

Catalogue No.:abx002501

Western blot analysis of extracts of various cell lines using NCOA5 Antibody (1/3000 dilution).

NCOA5 Antibody is a Rabbit Polyclonal antibody against NCOA5. This gene encodes a coregulator for the alpha and beta estrogen receptors and the orphan nuclear receptor NR1D2. The protein localizes to the nucleus, and is thought to have both coactivator and corepressor functions. Its interaction with nuclear receptors is independent of the AF2 domain on the receptors, which is known to regulate interaction with other coreceptors. Two alternatively spliced transcript variants for this gene have been described. However, the full length nature of one of the variants has not been determined.
