

Human MPHOSPH9 shRNA Plasmid

Catalogue No.:abx956887

Plasmid map (pGPU6/GFP/Neo).

shRNA Plasmid to inhibit MPHOSPH9 expression by RNA interference. This product contains 3 separate slightly different shRNA sequences which knock down human MPHOSPH9 gene specifically. Each vial contains 50 µg of lyophilized shRNA.

Target: MPHOSPH9

Reactivity: Human

Tested Applications: RNAi

Host: E. coli

Form: Lyophilized

Quality Control: The sequence of shRNA is guaranteed by sequencing.

Storage: Store lyophilized shRNA plasmid DNA at -20 °C with desiccant. Stable for one year. Once

resuspended, store at 4 °C for short term storage or -80 °C for long term storage. Avoid repeated

freeze/thaw cycles.

UniProt Primary AC: Q99550 (UniProt, ExPASy)

Gene Symbol: MPHOSPH9

GeneID: <u>10198</u>

NCBI Accession: NM_022782.3

KEGG: hsa:10198

Specificity: MPHOSPH9 shRNA Plasmid (Human) contains 3 different target-specific plasmids each encoding

19-23 nt (plus hairpin) shRNAs designed to knock down gene expression. Each plasmid contains a

resistance gene for the selection of cells stably expressing shRNA.

Datasheet

Version: 2.0.0 Revision date: 05 Sep 2025

Note: This product is for research use only.

Directions for use: Resuspend lyophilized shRNA plasmid DNA in 500 μl of deionised water. Each vial contains 50 μg of

lyophilized shRNA plasmid DNA. Suitable for up to 50 transfections.
