

Human MTBP shRNA Plasmid

Catalogue No.: abx958953

Plasmid map (pGPU6/GFP/Neo).

shRNA Plasmid to inhibit MTBP expression by RNA interference. This product contains 3 separate slightly different shRNA sequences which knock down human MTBP gene specifically. Each vial contains 50 µg of lyophilized shRNA.

Target: MTBP

Reactivity: Human

Tested Applications: RNAi

Host: E. coli

Form: Lyophilized

Quality Control: The sequence of shRNA is guaranteed by sequencing.

Storage: Store lyophilized shRNA plasmid DNA at -20 °C with desiccant. Stable for one year. Once resuspended, store at 4 °C for short term storage or -80 °C for long term storage. Avoid repeated freeze/thaw cycles.

UniProt Primary AC: Q96DY7 ([UniProt](#), [ExPASy](#))

Gene Symbol: MTBP

GeneID: [27085](#)

NCBI Accession: NM_022045.4

KEGG: hsa:27085

Specificity: MTBP shRNA Plasmid (Human) contains 3 different target-specific plasmids each encoding 19-23 nt (plus hairpin) shRNAs designed to knock down gene expression. Each plasmid contains a resistance gene for the selection of cells stably expressing shRNA.

Datasheet

Version: 2.0.0

Revision date: 06 Sep 2025

Note: This product is for research use only.

Directions for use: Resuspend lyophilized shRNA plasmid DNA in 500 µl of deionised water. Each vial contains 50 µg of lyophilized shRNA plasmid DNA. Suitable for up to 50 transfections.

For Reference Only
