

Human WHAMM shRNA Plasmid

Catalogue No.: abx964736

Plasmid map (pGPU6/GFP/Neo).

shRNA Plasmid to inhibit WHAMM expression by RNA interference. This product contains 3 separate slightly different shRNA sequences which knock down human WHAMM gene specifically. Each vial contains 50 µg of lyophilized shRNA.

Target: WHAMM

Reactivity: Human

Tested Applications: RNAi

Host: E. coli

Form: Lyophilized

Quality Control: The sequence of shRNA is guaranteed by sequencing.

Storage: Store lyophilized shRNA plasmid DNA at -20 °C with desiccant. Stable for one year. Once resuspended, store at 4 °C for short term storage or -80 °C for long term storage. Avoid repeated freeze/thaw cycles.

UniProt Primary AC: Q8TF30 ([UniProt](#), [ExPASy](#))

Gene Symbol: WHAMM

GeneID: [123720](#)

NCBI Accession: NM_001080435.2

KEGG: hsa:123720

Specificity: WHAMM shRNA Plasmid (Human) contains 3 different target-specific plasmids each encoding 19-23 nt (plus hairpin) shRNAs designed to knock down gene expression. Each plasmid contains a resistance gene for the selection of cells stably expressing shRNA.

Datasheet

Version: 1.0.0

Revision date: 05 Jul 2025

Note: This product is for research use only.

Directions for use: Resuspend lyophilized shRNA plasmid DNA in 500 µl of deionised water. Each vial contains 50 µg of lyophilized shRNA plasmid DNA. Suitable for up to 50 transfections.

For Reference Only
