

## **Connective Tissue Growth Factor (CCN2) Antibody Pair**

Catalogue No.:abx370849

Connective Tissue Growth Factor (CCN2) Antibody Pair for use in Sandwich ELISA Assay development. This antibody pair contains:

Component	5 × 96 tests	10 × 96 tests
Capture Antibody	200 µg	400 µg
Biotin-Conjugated Detection Antibody	50 µg	100 µg
Standard	2 µg	10 µg

Please note that quantities and concentrations may change between different batches.

It is recommended to use this antibody pair with abx098958 Antibody Pair Support Kit (Sandwich Method).

Target:	Connective Tissue Growth Factor (CCN2)
Reactivity:	Rabbit
Tested Applications:	ELISA
Recommended dilutions:	Dilute the Capture Antibody 125-fold with Coating Buffer.
	Dilute the Biotin-Conjugated Detection Antibody 200-fold with Detection Antibody Diluent.
	Optimal dilutions/concentrations should be determined by the end user.
Form:	Liquid (Capture Antibody and Detection Antibody)
Reconstitution:	Reconstitute the standard with Standard Diluent. The volume, and therefore standard
	concentration, should be determined by the end user.
Storage:	Aliquot and store at -20°C. Avoid repeated freeze/thaw cycles.
Buffer:	The Capture and Detection Antibody both contain 0.1% sodium azide.
Standard Form:	Lyophilized
Assay Type:	Sandwich
Capture Antibody Conjugation:	Unconjugated
Detection Antibody	Biotin
Conjugation:	
Concentration:	Capture Antibody: 0.5 mg/ml
	Biotin-Conjugated Detection Antibody: 0.2 mg/ml

Directions for use:Bring all components to room temperature (18-25°C) and briefly spin or centrifuge the vials before use. Working solutions should be prepared and used immediately. Recommended Procedure:1. Dilute the Capture Antibody to working concentration using Coating Buffer. Immediately coat the 96-well plate with diluted Capture Antibody (100 µl per well). Seal the plate and incubate at 4 °C overnight or at 37 °C for 2 hours2. Aspirate the wells and wash with Wash Buffer (350 µl per well) and allow to soak for 1-2 min. Remove the liquid by inverting and tapping the plate on to absorbent paper.3. Block the plate with Blocking Buffer (200 µl per well) at 37 °C for 1.5 hours.4. Repeat the aspiration/wash process in Step 2.5. Add 100 µl of standards or sample into the appropriate wells. Cover with a plate sealer and incubate at 37 °C for 1 hour.6. Repeat the aspiration/wash process in Step 2.7. Add appropriately diluted Biotin-Conjugated Detection Antibody (100 µl per well). Cover the plate with a new plate sealer and incubate at 37 °C for 1 hour.	Note:	THIS PRODUCT IS FOR RESEARCH USE ONLY. NOT FOR USE IN DIAGNOSTIC, THERAPEUTIC OR COSMETIC PROCEDURES. NOT FOR HUMAN OR ANIMAL CONSUMPTION.
<ul> <li>8. Repeat the aspiration/wash process in Step 2.</li> <li>9. Add appropriately diluted Streptavidin HRP (100 µl per well). Cover the plate with a new plate sealer and incubate at 37 °C for 30 min.</li> <li>10. Repeat the aspiration/wash process in Step 2.</li> <li>11. Add Substrate Solution (90 µl per well). Cover the plate with a new plate sealer and incubate at 37 °C for 10-20 min. Keep the plate in the dark and avoid exposure to light.</li> <li>12. Add Stop Solution (50 µl per well). Tap the side of the plate to ensure thorough mixing.</li> <li>13. Measure the absorbance immediately using a microplate reader set at 450 nm.</li> </ul>	Directions for use:	<ul> <li>before use.
