

shRNA Plasmid Negative Control

Catalogue No.: abx991273

Plasmid map (pGPU6/GFP/Neo).

shRNA Plasmid Negative Control. Negative Control for experiments using targeted shRNA transfection.

Tested Applications: RNAi**Host:** E. coli**Form:** Lyophilized**Quality Control:** The sequence of shRNA is guaranteed by sequencing.**Storage:** Store lyophilized shRNA plasmid DNA at -20 °C with desiccant. Stable for one year. Once resuspended, store at 4 °C for short term storage or -80 °C for long term storage. Avoid repeated freeze/thaw cycles.**Specificity:** Suitable as a negative control for experiments using targeted shRNA Plasmid DNA transfection. Encodes of a scrambled shRNA sequence that will not lead to the specific degradation of any cellular message.**Note:** This product is for research use only.**Directions for use:** Resuspend lyophilized shRNA plasmid DNA in 500 µl of deionised water. Each vial contains 50 µg of lyophilized shRNA plasmid DNA. Suitable for up to 50 transfections.
