

Uridine 5'-Monophosphate Synthase (UMPS) Antibody

Catalogue No.: abx004209

Western blot analysis of extracts of Jurkat cells using UMPS Antibody (1/1000 dilution).

UMPS Antibody is a Rabbit Polyclonal antibody against UMPS. This gene encodes a uridine 5'-monophosphate synthase. The encoded protein is a bifunctional enzyme that catalyzes the final two steps of the de novo pyrimidine biosynthetic pathway. The first reaction is carried out by the N-terminal enzyme orotate phosphoribosyltransferase which converts orotic acid to orotidine-5'-monophosphate. The terminal reaction is carried out by the C-terminal enzyme OMP decarboxylase which converts orotidine-5'-monophosphate to uridine monophosphate. Defects in this gene are the cause of hereditary orotic aciduria. Alternate splicing results in multiple transcript variants.
