

Bovine Serum Albumin (BSA)

Catalogue No.: abx082612

Bovine serum albumin (also known as BSA or "Fraction V") is a globular protein used extensively as a carrier protein to dilute antibodies. Because it is a small, stable, moderately non-reactive protein, it is often used as a general protein blocking agent in immunoassays and immunodetection protocols. BSA immunoassay applications include ELISA (Enzyme-Linked Immunosorbent Assay), immunoblots (western blot and dot blot), and immunocytochemistry (immunohistochemistry and immunofluorescence microscopy). This product is free from fatty acids and has not been tested for protease content.

Target: Bovine Serum Albumin**Conjugation:** Unconjugated**CAS Number:** 9048-46-8**Note:** This product is for research use only.
Not for human consumption, cosmetic, therapeutic or diagnostic use.
