

Phenylethanolamine N-Methyltransferase (PNMT) Antibody

Catalogue No.: abx004252

Western blot analysis of extracts of various cell lines using PNMT Antibody (1/1000 dilution).

PNMT Antibody is a Rabbit Polyclonal antibody against PNMT. The product of this gene catalyzes the last step of the catecholamine biosynthesis pathway, which methylates norepinephrine to form epinephrine (adrenaline). The enzyme also has beta-carboline 2N-methyltransferase activity. This gene is thought to play a key step in regulating epinephrine production. Alternatively spliced transcript variants have been found for this gene.
