

Human Monkeypox Virus IgG (Mpox IgG) ELISA Kit

Catalogue No.: abx092187

Human Mpox (Monkeypox) Virus IgG (MPXV IgG) ELISA Kit is an ELISA Kit for the in vitro qualitative measurement of MPXV IgG concentrations in Human serum and plasma.

Target: Monkeypox Virus IgG (Mpox IgG)

Research Area: Human Disease

Reactivity: Human

Tested Applications: ELISA

Recommended dilutions: Optimal dilutions/concentrations should be determined by the end user.

Storage: Shipped at 4 °C. Upon receipt, store the kit according to the storage instruction in the kit's manual.

Validity: The validity for this kit is 6 months.

Stability: The stability of the kit is determined by the rate of activity loss. The loss rate is less than 5% within the expiration date under appropriate storage conditions. To minimize performance fluctuations, operation procedures and lab conditions should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same user throughout.

Detection Method: Colorimetric

Assay Type: Indirect

Assay Data: Qualitative

Sample Type: Serum and plasma.

Note: THIS PRODUCT IS FOR RESEARCH USE ONLY. NOT FOR USE IN DIAGNOSTIC OR THERAPEUTIC PROCEDURES.

Please note that our kits are optimised for detection of native samples, rather than recombinant proteins. We are unable to guarantee detection of recombinant proteins, as they may have different sequences or tertiary structures to the native protein.
