

Ras Homolog Family Member D (RHOD) Antibody

Catalogue No.: abx004955

Immunofluorescence analysis of MCF-7 cells using RHOD Antibody

RHOD Antibody is a Rabbit Polyclonal antibody against RHOD. Ras homolog, or Rho, proteins interact with protein kinases and may serve as targets for activated GTPase. They play a critical role in muscle differentiation. The protein encoded by this gene binds GTP and is a member of the small GTPase superfamily. It is involved in endosome dynamics and reorganization of the actin cytoskeleton, and it may coordinate membrane transport with the function of the cytoskeleton. Two transcript variants encoding different isoforms have been found for this gene.
