

Complement C3 (C3) Antibody (Biotin)

Catalogue No.: abx105282

Complement C3 (C3) Antibody (Biotin) is a Rabbit Polyclonal antibody conjugated to Biotin against Complement C3. C3 plays a central role in the activation of the complement system. Its processing by C3 convertase is the central reaction in both classical and alternative complement pathways. After activation C3b can bind covalently, via its reactive thioester, to cell surface carbohydrates or immune aggregates. Derived from proteolytic degradation of complement C3, C3a anaphylatoxin is a mediator of local inflammatory process. It induces the contraction of smooth muscle, increases vascular permeability and causes histamine release from mast cells and basophilic leukocytes.
