

D2 Dopamine Receptor (DRD2) Antibody

Catalogue No.: abx112161

D2 Dopamine Receptor (DRD2) Antibody is a Rabbit Polyclonal antibody against D2 Dopamine Receptor (DRD2).

This gene encodes the D2 subtype of the dopamine receptor. This G-protein coupled receptor inhibits adenylyl cyclase activity. A missense mutation in this gene causes myoclonus dystonia, while other mutations have been associated with schizophrenia. Alternative splicing of this gene results in two transcript variants encoding different isoforms. A third variant has been described, but it has not been determined whether this form is normal or due to aberrant splicing.
